The documentation for this struct was generated from the following file:
bsp/vg/inc/vg_path.h

Chapter 2. File Documentation

2.1. bsp/vg/inc/vg_configuration.h File Reference

MicroEJ MicroVG library low level API: enable some features according to the hardware capacities.

Macros

- `#define MICROVG_CONFIGURATION_VERSION (3)`

Compatibility sanity check value. This define value is checked in the implementation to validate that the version of this configuration is compatible with the implementation.

- `#define (1)`
- `#define (2)`
- `#define (1)`
- `#define (2)`
- `#define (1)`
- `#define (2)`
- `#define VG_FEATURE_PATH_SINGLE_ARRAY`
- `#define VG_FEATURE_GRADIENT_FULL`
- `#define VG_FEATURE_FONT_FREETYPE_VECTOR`
- `#define`
- `#define`
- `#define`
- `#define`
- `#define (80 * 1024)`
- `#define (80 * 1024)`

2.1.1. Detailed Description

MicroEJ MicroVG library low level API: enable some features according to the hardware capacities.

Author. MicroEJ Developer Team

2.1.2. Macro Definition Documentation

2.1.2.1. MICROVG_CONFIGURATION_VERSION

```
#define MICROVG_CONFIGURATION_VERSION (3)
```

Compatibility sanity check value. This define value is checked in the implementation to validate that the version of this configuration is compatible with the implementation.

This value must not be changed by the user of the CCO. This value must be incremented by the implementor of the CCO when a configuration define is added, deleted or modified.

Definition at line 34 of file vg_configuration.h.

2.2. bsp/vg/inc/vg_freetype.h File Reference

MicroEJ MicroVG library low level API: implementation over FreeType.

```
#include "vg_configuration.h"
#include "vg_path.h"
```

Typedefs

- `typedef jint(*) (VG_PATH_HEADER_t *path, jfloat *matrix, uint32_t color, bool fill_rule_even_odd, void *user_data)`

Functions

- `void (void)`
- `jint (VG_FREETYPE_draw_glyph_t drawer, const jchar *text, jint face_handle, jfloat size, const jfloat *matrix, uint32_t color, jfloat letter_spacing, jfloat radius, jint direction, void *user_data)`
- `jint (jint color)`

2.2.1. Detailed Description

MicroEJ MicroVG library low level API: implementation over FreeType.

Author. MicroEJ Developer Team

Version. 6.0.1

2.3. bsp/vg/inc/vg_helper.h File Reference

MicroEJ MicroVG library low level API: helper to implement library natives methods.

```
#include <stdio.h>
#include <sni.h>
#include "mej_log.h"
```

Macros

- `#define (fmt, ...)`
- `#define (fmt, ...) MEJ_LOG(ERROR, MICROVG, fmt, ##__VA_ARGS__)`
- `#define VG_HELPER_NULL_GRADIENT 0`

Set this define to monitor freetype heap evolution. It needs `MEJ_LOG_MICROVG` and `MEJ_LOG_INFO_LEVEL` defines to print the heap logs.
- `#define FT_FACE_FLAG_COMPLEX_LAYOUT (((uint32_t)1) << 31)`

Freetype supplementary flag for complex layout Uses a free bit in freetype face flags to convey the complex layout mode information with the freetype face. `freetype.h` must be checked on freetype update to ensure that this bit is still free.
- `#define 3.1415926535`
- `#define (r) ((r) * (180.0f / M_PI))`
- `#define (d) (((d) * M_PI) / 180.0f)`
- `#define (f) (*(uint32_t *)&(f))`
- `#define (i) (*(float *)&(i))`

Functions

- `void (void)`
- `int VG_HELPER_get_utf (const unsigned short *text, int length, int *offset)`

Gets the UTF character from a text buffer at the given offset and updates the offset to point to the next character.
- `void (int faceHandle, const unsigned short *text, int length)`
- `bool (int *glyph_idx, int *x_advance, int *y_advance, int *x_offset, int *y_offset)`
- `const jfloat * (const jfloat *matrix)`
- `uint32_t (uint32_t color, uint32_t alpha)`
- `void (jfloat *dest, jfloat x, jfloat y, const jfloat *matrix)`

2.3.1. Detailed Description

MicroEJ MicroVG library low level API: helper to implement library natives methods.

Author. MicroEJ Developer Team

Version. 6.0.1

2.3.2. Macro Definition Documentation

2.3.2.1. VG_HELPER_NULL_GRADIENT

```
#define VG_HELPER_NULL_GRADIENT 0
```

Set this define to monitor freetype heap evolution. It needs MEJ_LOG_MICROVG and MEJ_LOG_INFO_LEVEL defines to print the heap logs.

NULL Gradient value

Definition at line 57 of file vg_helper.h.

2.3.3. Function Documentation

2.3.3.1. VG_HELPER_get_utf()

```
int VG_HELPER_get_utf (const unsigned short * text, int length, int * offset)
```

Gets the UTF character from a text buffer at the given offset and updates the offset to point to the next character.

Some characters have some special values; they are made up of two Unicode characters in two specific ranges such that the first Unicode character is in one range (for example 0xD800-0xD8FF) and the second Unicode character is in the second range (for example 0xDC00-0xDCFF). This is called a surrogate pair.

If a surrogate pair is incomplete (missing second character), this function returns "0" (error) and does not update the offset.

Parameters .

Table 2.1.

in	text	text buffer encoded in UTF16 where to read UTF character.
in	length	length of the text buffer.
	[in/out]	offset: offset in the text buffer where to read UTF character. Updated to the next character position.

Returns. The decoded UTF character.

Definition at line 164 of file vg_helper.c.

```

Author. MicroEJ Developer Team

Version. 6.0.1

2.15.2. Function Documentation

2.15.2.1. VG_HELPER_get_utf()

```
int VG_HELPER_get_utf (const unsigned short * text, int length, int * offset)
```

Gets the UTF character from a text buffer at the given offset and updates the offset to point to the next character.

Some characters have some special values; they are made up of two Unicode characters in two specific ranges such that the first Unicode character is in one range (for example 0xD800-0xD8FF) and the second Unicode character is in the second range (for example 0xDC00-0xDCFF). This is called a surrogate pair.

If a surrogate pair is incomplete (missing second character), this function returns "0" (error) and does not update the offset.

Parameters .

Table 2.2.

in	text	text buffer encoded in UTF16 where to read UTF character.
in	length	length of the text buffer.
	[in/out]	offset: offset in the text buffer where to read UTF character. Updated to the next character position.

Returns. The decoded UTF character.

Definition at line 164 of file vg_helper.c.

```
164
165     highPart = GET_NEXT_CHARACTER(textCharRam, length, *offset);
166     ret = 0;
167
168     ((highPart >= MIN_HIGH_SURROGATE) && (highPart <=
169      MAX_HIGH_SURROGATE)) {
170         (*offset < (length - 1)) {
171             lowPart = GET_NEXT_CHARACTER(textCharRam, length,
172             *(offset) + 1);
173
174             ((lowPart >= MIN_LOW_SURROGATE) && (lowPart <=
175              MAX_LOW_SURROGATE)) {
176                 *offset += 2;
177
178                 ret = 0;
179                 ret += ((int)highPart - (MIN_HIGH_SURROGATE));
180                 ret <= (int)10;
181                 ret += ((int)lowPart - (MIN_LOW_SURROGATE));
182                 ret += (int)MIN_SUPPLEMENTARY_CODE_POINT;
183             }
184         } {
185             *offset += 1;
186
187             ret = 0x0000FFFF & (int)highPart;
188         }
189     }
190
191     ret;
192 }
```
