Detailed Description

This MicroUI images heap allocator replaces the default allocator embedded in the MicroUI Graphics Engine. It is using a best fit allocator and provides some additional APIs to retrieve the heap information: total space, free space, number of blocks allocated.

```

```
#include <string.h>
```

```
#include <LLUI_INPUT_Impl.h>

#include "microui_event_decoder.h"
```

Detailed Description

This MicroUI FIFO (queue) logger replaces the default logger embedded in the MicroUI Input Engine. For each queue event, it stores the event's data size. This allows to be able to decode the event when LLUI_INPUT_dump() is called.

This logger does not interpret the event: it just recognizes the event's first element and event's data. When an event is detected, the logger calls microui_event_decoder.h functions.
